

5.14 Transmission Line Safety and Nuisance

The transmission lines to interconnect the Amended Project with the regional electrical grid have been licensed by the CEC. The transmission lines will be constructed, owned, and operated by the Imperial Irrigation District (IID). The Amended Project does not involve any changes to these already-licensed transmission lines. For these reasons, the transmission lines or their effects are not addressed in this Amendment Petition, and no further discussion of transmission line safety and nuisance is provided.

Transmission line safety and nuisance was addressed in the original SSU6 project licensing process. Relevant information is available in the AFC for the original SSU6 project and other project documents, including the original SSU6 Staff Assessment and the Commission's Final Decision.
